

Lacq Produra

Lacq Produra is a durable and high quality protector for all wooden surfaces. Produra contains very little solvents and is made out of natural components like vegetable oil and water. Thanks to the unique composition Produra nourishes the wood from within. It provides a translucent stain, which remains flexible so it will not crack, peel or blister even in severe exterior weather conditions. Produra allows the wood to breath, does not yellow and remains true to colour thanks to the highly resistant UV-filter.

Where to use:

Lacq Produra is suitable for all exterior wood. For example cladding, sheds, veranda's, fences, shutters.

Directions for use

- Surface should be dry, dust free and free of any surface contamination ie. oil or grease etc.
- Remove any loose parts. Sanding is not necessary, only when a smooth finish is required.
- Stir Produra well before use.
- Apply using a flat brush, roller or spray; to ensure a neat finish, apply Produra in the length-wise direction of the wood grain.
-
- Second layer can only be applied after complete drying of approximately 16 hours. We recommend three coats onto untreated timber.

Coverage

circa 16M²/L

Caution

Avoid release to the environment.

Wear protective gloves/ protective clothing/ eye protection/ face protection.

Keep out of the reach of children.

VOC<25g/l (2004/42/EC, cat. A/e 2010: 130 g/l)

Clean tools with water.
